## Authenticity of Video Evidence

---

The Intellex series digital video management system saves images on hard drives using a proprietary encoded file format. Intellex uses this proprietary encoding method for all recorded video data. This proprietary encoding technology used by Intellex makes manipulation and/or alteration of the original recorded video data stream virtually impossible and ensures the authenticity of the recorded video.

Intellex recorded video is authentic and is extremely difficult to alter because:

- ▶ Intellex encodes the recorded video stream in a proprietary format, and the American Dynamics family of digital recorders is the only commercially available devices capable of recording this format.
- ▶ Intellex's recording format gives each image a unique identification "stamp." An attempt to overwrite or alter the image renders the video unplayable.
- ▶ Even though Intellex's file structure is PC-compatible, the original video images are virtually impossible to alter or modify. American Dynamics does not provide any method to edit the original recorded video stream.
